

Missouri Seat Belt Usage Survey  
for  
2017

Conducted for the Highway Safety & Traffic Division of the  
Missouri Department of Transportation  
by  
The Missouri Safety Center  
University of Central Missouri

Final Report Issued  
September, 2017

## EXECUTIVE SUMMARY

The National Highway Traffic Safety Administration (NHTSA) issued new Uniform Criteria for State Observational Surveys of Seat Belt Use, with the Final Rule being published in the Federal Register (Vol. 76, No. 63, Friday, April 1, 2011, Rules and Regulations, pp. 18056 – 18059). The Uniform Criteria were revised in an effort to standardize the requirements for the state-wide observing and reporting of seat belt use for drivers and right front-seat passengers. The new requirements contain numerous important changes to include: county selection based upon fatality-based criterion rather than the population-based criterion of the past, the use of a weighted calculation based upon several factors, a change in the standard error from 5.0 percent to 2.5 percent, and the involvement of a qualified statistician in the sampling design and annual reporting aspects of the survey. Missouri's methodology was approved by NHTSA March 29, 2013.

The following report documents the 2017 results of Missouri's annual state-wide seat belt use survey. The principal objective being to establish a seat belt usage rate of drivers and right front-seat passengers from which strategies targeting educational and enforcement occupant protection programs can be developed. Missouri's sampling plan addresses both the need for a state-wide seat belt usage rate (required by NHTSA) and a usage rate for each of the seven Missouri Department of Transportation (MoDOT) Districts. A regional coalition consisting of traffic safety experts exists within each of the seven MoDOT District's and is tasked with the development of a regionally based strategy to reduce crash-related fatalities. The ability to provide each regional coalition with a district seat belt use estimate would be helpful in the establishment of programs to improve seat belt use.

Missouri's observational survey of seat belt usage took place June 5<sup>th</sup> through June 18<sup>th</sup>, 2017. The Highway Safety and Traffic Division of MoDOT contracted with the Missouri Safety Center located at the University of Central Missouri to help develop, implement, and analyze the 2017 observational survey with the statistical expertise being provided by Dr. Donald N. Nimmer, Director Emeritus of Institutional Research at the University of Central Missouri.

*Based upon a total of 115,902 vehicle occupants observed, the 2017 seat belt use rate on Missouri roadways was found to be 84.0 percent with a standard error of 0.2111. Of these 115,902 occupants, seat belt use could not be determined for 515 drivers and right front seat passengers, therefore, the non-response or unknown use rate for the 515 occupants was 0.44 percent, and does not exceed the 10 percent requirement established by NHTSA.*

The 1998 seat belt use survey was done as the base line; then each survey after and up through the 2012 seat belt use survey was conducted as a replication of the former and all were probability based surveys with the data collection locations representative of 85 percent of the State's population and was, at that time, in compliance with the guidelines recommended by NHTSA. However, due to the changes in methodology required by NHTSA, the "Final Rule", and Missouri, the 2013 through 2017 survey locations now account for 85 percent of the crash-related fatalities in the State, and for this reason the data collected during the 2013, 2014, 2015, 2016 and the 2017 survey may not be entirely comparable to those data collected prior to 2013.

Table 1 indicates the weighted results of observations from 1998 through 2017.

**Table 1: Observations and Usage Rate by Year, 1998-2017**

<b>Year</b>	<b>Usage Rate</b>	<b>Vehicles Observed</b>	<b>Total Observation (Driver&amp; Passenger)</b>
2017	84.0%	91,850	115,902
2016	81.4%	96,705	123,678
2015	79.9%	91,463	118,081
2014	78.82%	90,015	117,297
2013	80.07%	82,128	108,096
2012	79.39%	92,860	119,474
2011	78.95%	97,646	127,720
2010	76.03%	96,160	126,419
2009	77.18%	94,799	122,962
2008	75.78%	88,980	116,274
2007	77.16%	87,543	114,432
2006	75.18%	90,345	117,901
2005	77.41%	82,051	105,233
2004	75.88%	85,066	111,966
2003	72.93%	83,781	109,619
2002	69.37%	75,412	99,099
2001	67.91%	73,603	97,544
2000	67.72%	70,230	92,000
1999	60.8%	74,058	95,538
1998	60.4%	74,930	97,233

# **METHODOLOGY**

## **County Selection**

The State of Missouri is comprised of 114 counties and the City of St. Louis. For the purpose of this study the city of St. Louis and the County of St. Louis have been combined and have been counted as a single county. A total of 63 counties account for 85 percent of the total fatalities from 2008 – 2010 and these represent the primary sampling unit (PSU). The fatality data are reported by county, in descending order of magnitude, in Appendix A, Vehicle Occupant Fatalities by County 2008-2010.

The need for both a state and MoDOT District seat belt use rate is the basis for the utilization of a multi-stage stratification sampling design. The 63 counties were first categorized by urbanicity (urban-population over 50,000 and rural-fewer than 50,000) and then by their respective MoDOT District (Northwest, Northeast, Kansas City, Central, St. Louis, Southwest and Southeast). The boundaries of these districts and the counties which lie therein are illustrated on the map in Appendix B, Top Counties with 85% of Vehicle Occupant Fatalities 2008-2010. It was further determined that two urban and two rural counties were desired for each MoDOT District which, when feasible were randomly selected, Population by Region for Top 85% Vehicle Occupant Fatality Counties 2010 Census Data is illustrated in Appendix C. The weighting assignment of each county for this random selection process was based upon the percent of vehicle miles traveled (VMT). However, an adjustment was made to both the Northwest and Northeast District's as only one urban county was available and an adjustment was made to the St. Louis District where there were no rural counties available for selection. As a result of this process 28 counties were selected for inclusion in the survey of seat belt use in Missouri.

## **Roadway Classification and Segment Selection**

Twenty roadway segments (sites) were selected in each of the 28 survey counties for a total of 560 sites; that selection was based upon eight functional road classifications identified by MoDOT (Urban Interstate, Urban Freeway/Expressway, Urban Arterial, Urban Collector, Rural Interstate, Rural Freeway/Expressway, Rural Arterial, and Rural Collector) and their relative Daily Vehicle Miles Traveled (DVMT).

The target stratification proportions for each of the 28 survey counties and the corresponding 20 Road Segments by Functional Road Type are reported by MoDOT District in Appendix D.

## **DATA COLLECTION**

### **Observers and Quality Control Monitors**

Forty-seven observers were hired and trained by the Missouri Safety Center. All but eight of the observers were experienced data collectors who had conducted seat belt observations in past surveys. The eight newly hired observers received additional and individual training from the Missouri Safety Center.

All observers and quality control monitors were trained in the appropriate procedures of Missouri's survey. Data collection protocols, scheduling, site locations, field protocols and reporting requirements were all topics covered during the training. Additionally, observers were instructed on how to proceed in conditions of bad weather or temporary traffic impediments, as well as, if an observation site needed to be abandoned due to construction activities, safety concerns, or some other legitimate reason.

The Quality Control (QC) Monitors were given additional training that focused on their specific duties. These duties included verifying that the observers were at the appropriate observation site during the assigned time, ensuring that the observers were following field protocol and offering assistance if needed. Six quality control monitors were utilized to conduct random unannounced visits to 92 of the total 560 observation sites. This represents a 16 percent monitoring rate which is well above the 5 percent rate required by NHTSA.

### **Observation and Survey Protocols**

Observation sites were geographically organized into clusters of 3, 4, or 5 sites to facilitate a reasonable driving time between locations. Each cluster was randomly assigned a single day of the week for the observation to take place. The sites within the cluster were then randomly assigned an observation period of time.

Two observers were required to work together at each observational site; one to articulate the observations for each vehicle while the other would record the observations. Each observer was given a survey schedule and a detailed map of site locations for their respective observational counties. The survey schedule specified the site number (both primary and alternate), survey route, referenced intersection, week day, start time, MoDOT District, and road type. Using the identified referenced intersection listed on the survey schedule, the observer was given the discretion to use their best judgment to select the safest location to conduct the survey. Observers recorded data from one lane (outermost or far-right lane) and one direction of travel per survey location. The observations were conducted on all days of the week during daylight hours between 7:00 a.m. and 6:00 p.m. Observations started at the predetermined assigned time and continue for exactly 45-minutes.

Observations for use, non-use or unknown use of seat belts was recorded for all drivers and front-seat outboard passengers including children riding in booster seats (excluding children in child safety seats). If there was no passenger in the right front-seat of an observed vehicle then the passenger field was left blank on the data collection form. Passenger cars, van/minivans, sport utility/crossover vehicles, pickup trucks and commercial vehicles weighing less than 10,000 pounds are all qualifying vehicles for the survey and are eligible for observation, regardless of the license state. The additional data element of driver gender was also collected and recorded. All these data were recorded on the Site Summary Form (Appendix E) and Observation Form (Appendix F).

## RESULTS

### Weighted vs. Un-weighted Estimations

Information recorded using the Site Summary and Observation Forms represent each vehicle observed. This information is considered to be raw or *un-weighted* data. While it might appear that using such information is the most direct and easiest to understand, it is often misleading when one considers that the observations on some road segments included every vehicle during the specified time period while significantly fewer vehicles were counted on other road segments. That is, all vehicles were counted on most two lane roads but it will not be true of multi-lane roadways where the observers included only those vehicles in the outer most right hand lane and/or, if the traffic was heavy, and recorded perhaps every third vehicle. For example, the St. Louis District comprised of primarily busy multi-lane roadways had observations totaling 16,974 vehicles at its 20 sites, while the Southwest and Southeast Districts each had nearly the same number of observations for their 20 sites but included a higher proportion of 2-lane roads. It is apparent that the data observed for the St. Louis District represent far more vehicles than do the data for the Southwest and Southeast Districts. This was compensated by considering the greater DVMT represented in the St. Louis District as compared to the Southwest and Southeast District resulting in a *weighted* estimation. Similarly, DVMT was used for selecting counties and observation sites by the eight functional road classifications resulting in further weighting of the estimations. NHTSA requires the estimations of seat belt use to be calculated using weighted data; this was done in Missouri using the specifications described in the approved observational plan. Each of the following sections will be identified as containing either weighted or un-weighted data.

## STATE-WIDE RESULTS

Observers recorded data from 560 sites within the 28 Missouri counties on 115,902 vehicle occupants of whom 91,850 were drivers and 24,052 were outboard front seat passengers; of these, belt use was unknown for 515 vehicle occupants.

### *Weighted Data*

Tables 2-4, show only weighted data and include the relative weights of the DVMT; however they do exclude the unknowns (515 vehicle occupants).

The overall belt use rate for drivers and passengers combined is 84.0 percent (95 Percent Confidence Interval 83.8% - 84.2%). Table 2 shows the 2017 Seat Belt Use in Missouri.

**Table 2: State-wide, Seat Belt Use in Missouri**

<b>Belt Use</b>	<b>Frequency</b>	<b>Percent</b>	<b>Standard Error of Percent</b>
<b>Belted</b>	94,532	84.0	0.2111
<b>Non-Belted</b>	20,855	16.0	0.2111
<b>Total</b>	115,387	100.0	

The 2017 survey sampling plan separates the state into seven MoDOT Districts; the weighted seat belt use rates by district are shown in Table 3. The range of percent is from a low of 80.5 percent in the Kansas City District to a high of 91.9 percent in the Central District.

**Table 3: State-wide, Belt Use by MoDOT District**

<b>District</b>	<b>Percent Belted</b>
<b>Northwest</b>	83.9
<b>Northeast</b>	83.0
<b>Kansas City</b>	80.5
<b>Central</b>	91.9
<b>St. Louis</b>	81.4
<b>Southwest</b>	83.4
<b>Southeast</b>	88.7

Table 4 shows the overall vehicle occupant seat belt use by roadway type. Roadways are stratified using the eight functional roadway classifications of MoDOT. The roadway type Rural Interstate had the highest seat belt use whereas the roadway type Rural Collector had the lowest, at 90.1 and 64.0 percent respectively.

**Table 4: State-wide, Belt Use by Roadway Type**

<b>Roadway Type</b>	<b>Percent Belted</b>
<b>Rural Arterial</b>	71.7
<b>Rural Collector</b>	64.0
<b>Rural Freeway/Expressway</b>	83.9
<b>Rural Interstate</b>	90.1
<b>Urban Arterial</b>	73.9
<b>Urban Collector</b>	74.0
<b>Urban Freeway/Expressway</b>	83.5
<b>Urban Interstate</b>	81.1

### ***Un-weighted Data***

Tables 5-11 show only raw or un-weighted data and do not include the relative weights of the DVMT; they do include the unknowns (515 vehicle occupants). These numbers are not directly comparable to the weighted estimates.

Table 5 exhibits the un-weighted estimates of seat belt use by drivers (81.1%), passengers (83.4%), and overall (83.4%).

**Table 5: State-wide, Belt Use by Vehicle Occupant\***

<b>Vehicle Occupant</b>	<b>Belted</b>		<b>Non-Belted</b>		<b>Unknown</b>	
	<b>Frequency</b>	<b>Percent</b>	<b>Frequency</b>	<b>Percent</b>	<b>Frequency</b>	<b>Percent</b>
<b>Drivers</b>	74,482	81.1	17,054	18.6	314	0.3
<b>Passengers</b>	20,050	83.4	3,801	15.8	201	0.8
<b>Overall</b>	94,532	81.6	20,855	18.0	515	0.4

\* Un-weighted Data

Table 6 distributes seat belt usage by MoDOT District. Usage varied from a low of 76.4 percent in the Southwest District to a high of 88.1 percent in the Central District.

**Table 6: State-wide, Belt Use by MoDOT District\***

<b>MoDOT District</b>	<b>Belted</b>		<b>Non-Belted</b>		<b>Unknown</b>		<b>Overall</b> Percent based upon a total of 115,902 observed	
	<b>Freq.</b>	<b>Percent</b>	<b>Freq.</b>	<b>Percent</b>	<b>Freq.</b>	<b>Percent</b>	<b>Freq.</b>	<b>Percent</b>
<b>Northwest</b>	9,856	77.7	2,775	21.9	49	0.4	12,680	10.9

<b>Southeast</b>	13,012	83.6	2,517	16.2	34	0.2	15,563	13.4

\* Un-weighted data

Driver and Passenger seat belt use by roadway classification is displayed in Table 7 and shows that belt use was highest on Rural Interstate (88.8%). The lowest usage was recorded for the Rural Collector (66.4%) classification.

**Table 7: State-wide, Driver & Passenger Belt Use by Roadway Classification\***

Roadway Type	Belted		Non-Belted		Unknown		Overall Percent based upon a total of 115,902 observed	
	Freq.	Percent	Freq.	Percent	Freq.	Percent	Freq.	Percent
Rural Arterial	10,504	74.2	3,595	25.4	60	0.4	14,159	12.2
Rural Collector	1,664	66.4	823	32.8	20	0.8	2,507	2.2
Rural Freeway / Expressway	8,636	81.0	1,949	18.3	74	0.7	10,659	9.2
Rural Interstate	33,880	88.8	4,180	10.9	98	0.3	38,158	32.9
Urban Arterial	12,846	72.2	4,863	27.3	84	0.5	17,793	15.4
Urban Collector	1,075	70.9	428	28.2	13	0.9	1,516	1.3
Urban Freeway / Expressway	12,095	82.6	2,465	16.8	88	0.6	14,648	12.6
Urban Interstate	13,832	84.0	2,552	15.5	78	0.5	16,462	14.2

\* Un-weighted data

The SUV had the highest seat belt usage for drivers at 86.5 percent, and trucks had the lowest seat belt usage at 69.3 percent. Table 8 shows seat belt use by drivers for vehicle type.

**Table 8: State-wide, Driver Belt Use by Vehicle Type\***

Vehicle Type	Belted		Non-Belted		Unknown		Overall Percent based upon a total of 91,850 observed	
	Freq.	Percent	Freq.	Percent	Freq.	Percent	Freq.	Percent
Passenger Cars	29,476	82.7	6,038	16.9	124	0.4	35,638	38.8
Sport Utility/Crossover	23,594	86.5	3,611	13.2	76	0.3	27,281	29.7
Pickup Trucks	14,316	69.3	6,233	30.2	102	0.5	20,651	22.5
Van/Minivan	7,096	85.7	1,172	14.2	12	0.1	8,280	9.0

\* Un-weighted data

An additional data element collected during the survey was that of Driver Gender. Table 9 provides the seat belt use estimation by driver gender. There were more male drivers 56,138 (61.1%) observed than female drivers 35,712 (38.9%).

**Table 9: State-wide, Driver Belt Use by Gender\***

Gender	Belted		Non-Belted		Unknown		Overall Percent based upon a total of 91,850 observed	
	Freq.	Percent	Freq.	Percent	Freq.	Percent	Freq.	Percent
Female	30,513	85.4	5,100	14.3	99	0.3	35,712	38.9
Male	43,969	78.3	11,954	21.3	215	0.4	56,138	61.1

\*Un-weighted Data

The 2017 survey was scheduled and conducted over a fourteen day period (June 5<sup>th</sup> through 18<sup>th</sup>), between the hours of 7:00 am and 6:00 pm. Table 10 shows that of the 115,902 observations of both drivers and passengers Sunday had the highest number of observations at 19,169.

**Table 10: State-wide, Driver & Passenger Belt Use by Day of the Week\***

Day of the Week	Belted		Non-Belted		Unknown		Overall Percent based upon a total of 115,902 observed
